Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Independent claims 1 and 27, when considered as a whole, are allowable over the prior arts of record. The prior arts of record do not teach or suggest the combination of means, arranged and interacted to perform the step of Specially, Bozdagi et al. teaches displaying a print dialog driver box to a user (column 12, lines 20-50); a user interface for receiving instruction from a user for controlling segmentation of video time-based media content (column 2, lines 8-13) for printing based on one or more features within the video time-based media content (column 2, lines 30-34), and the user interface comprising a content selection field displaying a graphical representation of

the audio or video time-based media content (column 9, lines 50-65); the instructions from the user comprising selection of a segment of the representation of the video time-based media content (column 2, lines 42-55); and a media analysis module communicatively coupled to the user interface, the media analysis module analyzing features of the video time-based media content to extract the segment of the video time-based media content selected from the representation based at least in part on the instructions received from the user in the user interface (column 2, lines 43-55 and column 10, lines 47-64); while Bozdagi et al. teach selection of a segment of the representation of the video time-based media content, Yang et al. teach the printable representation of multiple albums of videos (figure 6, figure 12, figure 18); and an output device for printing the printable representation of the audio or video time based media content to a tangible medium (column 2, lines 14-15). However, none of the references teach or suggest a user interface for receiving instructions from a user for controlling segmentation of audio or video time-based media content for printing based on one or more features within the audio or video time-based media content; wherein the features including any of speech recognition, optical character recognition, facial recognition, speaker detection, facial detection and event detection; wherein a media analysis module communicatively coupled to the user interface, the media analysis module analyzing the features of the audio
